On the Information Technology Department web page I found that you are looking for talented students. Since I do want to work in application sphere this is great opportunity for me to utilize my knowledge. Therefore, I am applying for the **Summer Trainee** position. My major subject is Technomathematics and the minor one is Information Technology.

I consider myself as a very ambitious and responsible person, who wants to prove that he deserved to work in Lappeenranta University of Technology. I have got perfect educational background from Petrozavodsk State University and I have refined this at LUT. In particular, I appreciate that studies at LUT gave me valuable Matlab usage experience and enriched my knowledge in statistics. What is more, a great opportunity to communicate with international people in Lappeenranta let me improve my English skills. Nowadays I can easily speak in English with everyone.

I am amused by constructive toys like origami, puzzles and balloon animals which allow me to progress my intelligence skills, which is particularly important for me as a mathematician. Playing chess helps me develop strategic and analytical thinking as well. I adore sport, especially I am fond of roller skating, skating and skiing. I am a person who likes to attempt new engaging activities.

Thank you for your consideration.

Sincerely yours,
Ivan Martynov
