Dear Hiring Manager,

Please accept my cover letter for the Design Engineer position at ABB. I would be happy to have a chance to work at ABB in the product development chain and put my best effort to prove worth being part of the team.

I enjoy coding and I am always trying to produce the most clean, optimized and reusable code. The C++ language strikes with its versatility and beauty and it amuses me more than other languages. Obviously, the learning process never ends and I am eager to develop my skills specifically for 3D graphics and continue with such an experienced and respected company as ABB.

I thank you in advance for your consideration.

Sincerely,  
Ivan Martynov
