Software developer / Analyst trainee Application

Dear Hiring Manager,

Please accept my cover letter for the position of Software developer / Analyst trainee at Posti Group. The opportunity to develop software with data analysis tasks is a great chance to have my analytical and programming skills applied.

My programming skills are coming from a variety of languages: C/C++, Python, Java, Matlab, Pascal, Prolog and some others. I have started coding in 2002 and picking up new languages / technologies is no problem for me.

Currently, I am pursuing my Ph.D. degree at Lappeenranta University of Technology. I have devised a set of Matlab functions and routines to calculate shadow areas using satellite geographical elevation data.

During master studies I have been working with 3D point clouds, including the use of Delaunay triangulation routine to compute Betti numbers. Later on I have earned experience in image processing and camera/projector calibration with the help of Matlab and C++ libraries.

I enjoy coding and always strive to produce the most clean, optimized and reusable code. Obviously, the learning process never ends and I am eager to develop my skills further specifically for the development of analysis and planning software. Hopefully, my sleeves will soon be rolled up and I shall start hands-on work with the team of Posti experts!

I thank you in advance for your consideration.

Sincerely,
Ivan Martynov
